Week 4 Responsive web apps

Task 1

Declarative rendering is the ability to bind and set data using Vue framework so that it can render to the DOM, honestly Vue is hard at first if you don't know the basics but with experience and learning the fundamentals it gradually becomes easier to understand and how to implement the code.

Task 2

Task 2 conditions and for loops are difficult at the start since I was trying to use data across multiple divs and elements. However, I found that if you use forms and data binding it makes the process a lot easier to get cross functionality with multiple Vue functions.

Reflection

Within the weeks task I implemented a simple responsive grid layout with multiple Vue components such as v-if, form, else, show and for loops along with embedding and layout.

Overall, I believe I need to study and learn more about the concepts of Vue frameworks and implementation methods to better improve my website designs.
